Aromatic molecules 241
Atomic charges 301
Atomic spherical orbitals 25

Barbituric acid, dissymmetric derivatives of ~ 197
Bivariational procedures 161

$C_2H_2F^+$, valence tautomers of ~ 51
Charge-localized orbitals 7
Chemisorption 61
Chiroptical spectra, influence of vibronic interactions on ~ 75
CI methods, energy extrapolation in ~ 217
Closed shell complex MO formalism 119
Co(acacen), adducts of ~ 189
Complex molecular orbitals method 119
Configuration interaction (CI) expansions 281
Correlation in H_5^+ 149
$Cr(CO)_6$ 229
CrS 211
Cytosine tautomers 1

Dioxygen, coordination of ~ 189
Dipole moments 7
Direct energy minimisation within the MC approach 93
Distortion parameters, ligand field ~ 33

ESCA 321
Excess electrons in water and methane 103
Extended CNDO/2 229

$Fe(CO)_5$ 229
FeS 211
Fluorocarbons, unsaturated ~ 321
Four centre integrals 247
Fourier transforms in MO theory 281
Frenkel exciton lattice sums 281
Frost-localized orbitals 7

$(H_2)_2$ 339
$(H_2)_2$, $Li^+ + H_2$ 329
H_5^+, geometry and stability of ~ 149

Intermolecular energies 329
Intermolecular interactions 329

K_2PtCl_4, forbidden electronic transitions at equilibrium geometry 255

Ligand field theory 33
$[LiNH_3]$cation 17

MC approach 93
Metal complexes 75
Method of moments versus a least squares method 161
Molecular quantum mechanics 127
Multipole moments 301
Multiple scattering method 173

$Ni(CN)_4^{2-}$ 229
Nuclear spin-spin coupling constants 185

Oxygen, chemisorption and diffusion on graphite 61

Pattern recognition in molecular quantum mechanics 127
Polarizabilities 7
Pseudopotentials, calculations of ~ 103

Quadrupole moments 7

Random-phase approximation 111
Resistance, electrical 313

Shake-up phenomena 321
Spin density distribution, McLachlan modified method for calculating ~ 277

Thymine tautomers 1
Transferred hyperfine interactions 173
Transformation of two-body density matrix 247
Transition metals 229
Transition metal complexes 173
Transition metal compounds 211
Triplet instability 111

Water, chemisorption and diffusion on graphite 61

ZnS 211

Notes on Preparation of Illustrations

Selection of illustration material: In order to obtain the best results in reproduction, to avoid delays during production and hence unnecessary costs, we ask authors to note the following points when selecting and preparing illustration copy.

1. **Half-tones** (photographs, photomicrographs, X-rays, instrument traces etc.)

   - Send only good, well-contrasted glossy prints of the original negative; prints should be trimmed at right angles; send contact copies of X-rays — if these are not available, the actual X-ray films.
   - Mark or trim off marginal portions which are not required (at right angles, please).
   - State scale of reduction, if any, with due allowance for the format of the printed page (print area).
   - Group figures into whole-page plates; see that they match in the proposed scale of reduction.
   - With X-rays, in particular, mark the significant portions on the back of the copy, or on a cover sheet.
   - Enter inscriptions, marker lines etc. neatly and in the appropriate size, either on the photograph itself or on a cover sheet.

2. **Line drawings**

   - State final size of illustration, with due allowance for print area.
   - The ideal is for drawings to be twice the final size and executed in indelible black ink.

     Important points to note: thickness of lines, size of inscriptions, size of measuring points, adequate spacing of shaded and dotted areas.

     Words should be in upper and lower case characters (not block capitals).

Introducing the 1st multidisciplinary guide to review articles

INDEX TO SCIENTIFIC REVIEWS™

Now you can easily find review articles on any subject in science. Each year the *Index to Scientific Reviews (ISR™)* will index over 16,000 reviews selected from more than 2,700 of the world's most important journals.

Broad Coverage
Over 100 disciplines in every area of science are covered:

- **Agricultural, Biological & Environmental Sciences**
- **Engineering, Technology & Applied Sciences**
- **Medical & Life Sciences**
- **Physical & Chemical Sciences**
- **Social & Behavioral Sciences**

So you won't have to go through separate references to locate review articles for subjects in any of these areas. With one index—the *ISR*—you can cross disciplinary lines and retrieve these key articles no matter where they were published in the literature. The *ISR* will even cover the literature published in quarterly and annual "review" publications (e.g., *Annual Review of Genetics).*

Effectively Indexed
The *Index to Scientific Reviews* makes it easy to find the review articles you need. Search by authors, title words and phrases, and organizations. Or use the *ISR*'s citation index—it lets you start a search with previously published material relevant to a subject and find more recent articles through citation relationships.

Highly Current
The *ISR* indexes the review literature on a calendar year basis. A soft-bound semiannual issue (covering January to June) will be available each September, and a hard-bound annual cumulation will appear the following April. So you can find new articles while they're still new.

What's It To You?
The *ISR* is a quick and easy way to find: 1) summaries of knowledge in fields unfamiliar to you, 2) those key articles you need to start a really thorough literature search, 3) the most recent review articles on any subject in science.

For More Information . . .
The first *ISR* annual cumulation (covering the 1974 literature) will soon be out, so get the full story on the *Index to Scientific Reviews* now. Just fill in the coupon, and mail it today. ©1974 ISI

I'd like to know more about the *Index to Scientific Reviews*™.

Aus den Besprechungen der ersten Auflage:

„In den letzten Jahren ist die Bedeutung geringster Mengen zahlreicher Elemente für das Verständnis von chemischen Vorgängen in der Biochemie, Metallurgie, Halbleitertechnik sowie Agrikultur-, Lebensmittel- und Kunststoff-Chemie sprunghaft angestiegen. Naturgemäß wuchs damit auch das Interesse an brauchbaren Methoden zur quantitativen Bestimmung von Spurenelementen in den verschiedensten Materialien. Das vorliegende Buch soll die spezielle Arbeitstechnik und Methodik des Spurenanalytikers den auf den verschiedenen Gebieten der Chemie arbeitenden Wissenschaftlern näherbringen und eine mühsame Suche in der oft weit verstreuten Literatur ersparen. Beiden Forderungen wird das ‚Handbuch der Spurenanalyse' vollauf gerecht.
. . . Es wird jedem, der sich mit mikroanalytischen Problemen beschäftigt, ein unentbehrliches Hilfsmittel zur Orientierung über dieses interessante und aktuelle Gebiet der Chemie sein . . ."

Zeitschrift für Lebensmittel-untersuchung und -Forschung

„ . . . Vor uns liegt nun ein seitenstarkes, sauber und übersichtlich abgefaßtes Buch, in dem das Chemiker-Ehepaar O. G. Koch–G. A. Koch-Dedic mit unwahrscheinlichem Fleiß aus seinem Erfahrungs- und Wissensschatz heraus alles das zusammengestellt hat, was für das junge Gebiet der Spurenanalytik von wesentlicher Bedeutung ist. Es ist ein umfassendes Nachschlagewerk, auch für den ausgesprochenen Spezialisten. Es wird wenig geboten an – im übrigen entbehrlicher – Theorie, um so mehr aber an Rezepturen für alle erdenklichen Bereiche, in denen Spurenstoffe eine Rolle spielen . . ."

Laboratoriums Praxis

„Es ist diesmal wirklich keine mißbräuchliche Verwendung des Wortes ‚unentbehrlich', wenn man damit die Bedeutung des Buch-Werkes als Einführung und Anleitung oder als Nachschlagewerk für jeden in Wissenschaft oder Praxis charakterisiert, der sich mit den anorganischen Spurenelementen zu befassen hat."

Deutsche Lebensmittel-Rundschau

Instructions to Authors

Manuscripts should be *submitted in duplicate*, typed in double-line spacing on one side of the paper only. Form and contents should be carefully checked to exclude the need for corrections in proof. The author should already mark in the manuscript where figures and tables are to be inserted, as he will receive only *one set of proofs* to correct typographical errors. Authors will be charged for corrections in proof involving changes, additions, or deletions to the original manuscript.

The papers should be preceded by an *English summary* of not more than 100 words. Papers not written in English should have an English translation of the title.

Immediately following the summary, a list of *Key words* (not exceeding five items normally) should be supplied for subject indexing.

Literature references should be numbered and listed at the end of the paper. They should be cited as follows: *journal papers* — names and initials of all authors, journal with abbreviations according to the I.U.P.A.C. list (Chemical Abstracts, Vol. 55, 1961), volume and page number, year in parentheses; *books* — names of authors, full title, edition, place, publisher and year. References should be cited in the text by number.

Figures, graphs, tables and structural formulae should be separated from the text and be numbered. Original drawings and graphs should be made in Indian ink with lines of uniform thickness. Authors should keep in mind that drawings will be reduced to a size not exceeding 12 × 19 cm. In general it should be assumed that the same degree of reduction will apply to all figures in the same paper. Inscriptions should allow for any reduction in scale — a capital letter should be about 1.8 mm in height in the final version. Computer print-outs should be black and evenly printed to allow direct reproduction.

Captions, which should be brief, should be typed separately and attached to the manuscript.

Formulae should be typewritten, special attention being given to the placing of indices and exponents to that they are recognizable as such even though there is no difference in size. Formulae should preferably be written in a "linear" form e. g. $\exp(-\varepsilon/kT)$ instead of $e^{\frac{\varepsilon}{kT}}$). It will help the printer if in doubtful cases the position of indices and exponents is marked thus: $b_{\wedge}^{\wedge}$, $a_{\vee}^{\vee}$.

Underlining for special alphabets and typefaces should be done according to the following code:

violet:	numerals to be distinguished from letters (1, *l*; zero, *O*)		
single underlining:	small letter		
double underlining:	capital letter	red:	Greek
brown:	boldface	blue:	Gothic
yellow:	upright	green:	Script

The following are frequently confused:

$\cup, \mathsf{u}, \bigcup, U$; $\circ, o, O, 0$; $\times, x, X, \varkappa$; $\vee, v, \nu$; $\theta, \Theta, \phi, \varphi, \Phi, \varnothing, 0$; ψ, Ψ; ε, ξ; a', a^1; the symbol a and the indefinite article a. Please take care to distinguish them in some way.
